

Fatigue Prediction GRU Model Architecture

GRU Model Architecture:

- Input features: 5 (Blink Count, Blink Rate, Yawn Count, Yawn Rate, Fatigue Score)
- Sequence length: 1800 (30 minutes of data)
- Hidden size: 64
- Number of GRU layers: 2
- Dropout rate: 0.2 (between GRU layers)
- Output: Fatigue Score prediction
- Training: MSE Loss, Adam optimizer
